Set Theory Problems

Short-answer problems about sets.

Question 1 *What is your name?*

Problem 2 *Given two sets X and Y, explain what is meant by $X \cup Y$.*

Problem 3 *Given two sets X and Y, explain what is meant by $X \cap Y$.*

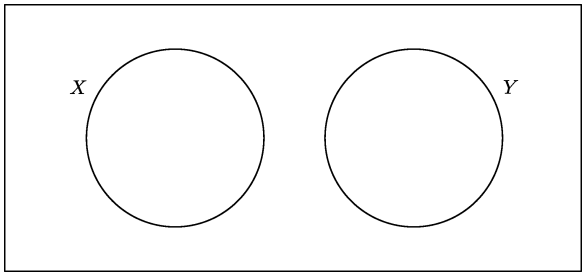
Problem 4 *Given two sets X and Y, explain what is meant by $X - Y$.*

Problem 5 *Explain the difference between the symbols $\in$ and $\subset$.*

Problem 6 *How is $\{\emptyset\}$ different from $\emptyset$?*

Problem 7 *Draw a Venn diagram for the set of elements that are in X or Y* but not both. *How does it differ from the Venn diagram for $X \cup Y$?*

Problem 8 *If we let X be the set of "right triangles" and we let Y be the set of "equilateral triangles" does the picture below show the relationship between these two sets?*



Author(s): Bart Snapp and Brad Findell

Explain your reasoning.

Problem 9 *If $X = \{1, 2, 3, 4, 5\}$ and $Y = \{3, 4, 5, 6\}$ find:*

(a) $X \cup Y$

(b) $X \cap Y$

(c) $X - Y$

(d) $Y - X$

Problem 10 *Let $n\mathbb{Z}$ represent the integer multiples of n. So for example:*

$$3\mathbb{Z} = \{\ldots, -12, -9, -6, -3, 0, 3, 6, 9, 12, \ldots\}$$

Compute the following:

(a) $3\mathbb{Z} \cap 4\mathbb{Z}$

(b) $2\mathbb{Z} \cap 5\mathbb{Z}$

(c) $3\mathbb{Z} \cap 6\mathbb{Z}$

(d) $4\mathbb{Z} \cap 6\mathbb{Z}$

(e) $4\mathbb{Z} \cap 10\mathbb{Z}$

In each case explain your reasoning.

Problem 11 *Make a general rule for intersecting sets of the form $n\mathbb{Z}$ and $m\mathbb{Z}$. Explain why your rule works.*

Problem 12 *If $X \cup Y = X$, what can we say about the relationship between the sets X and Y? Explain your reasoning.*

Problem 13 *If $X \cap Y = X$, what can we say about the relationship between the sets X and Y? Explain your reasoning.*

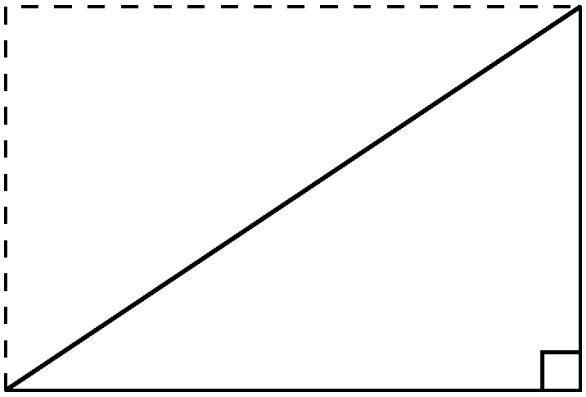
Problem 14 *If $X - Y = \emptyset$, what can we say about the relationship between the sets X and Y? Explain your reasoning.*

Proof by Picture

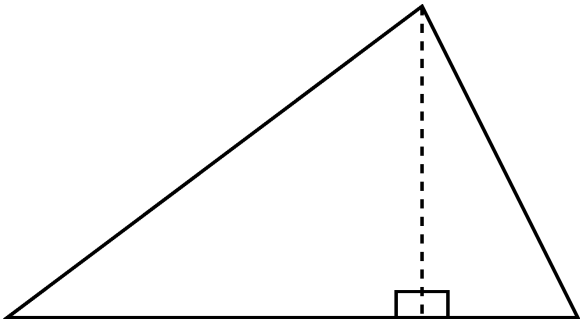
Short-answer proofs by pictures.

Question 15 *What is your name?*

Problem 16 *Explain how the following picture "proves" that the area of a right triangle is half the base times the height.*

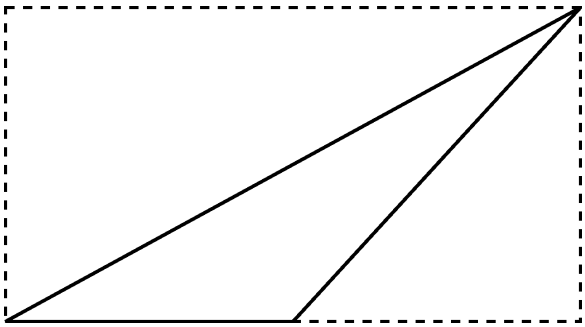


Problem 17 *Suppose you know that the area of a* ***right*** *triangle is half the base times the height. Explain how the following picture "proves" that the area of* ***every*** *triangle is half the base times the height.*



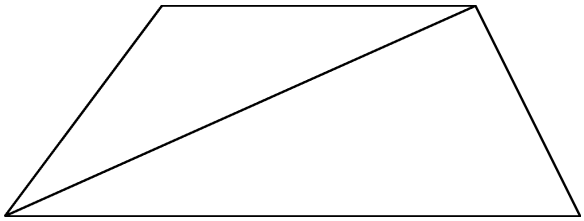
Author(s): Bart Snapp and Brad Findell

Now suppose that a student, say Geometry Giorgio attempts to solve a similar problem. Again knowing that the area of a right triangle is half the base times the height, he draws the following picture:



Geometry Giorgio states that the diagonal line cuts the rectangle in half, and thus the area of the triangle is half the base times the height. Is this correct reasoning? If so, give a complete explanation. If not, give correct reasoning based on Geometry Giorgio's picture.

Problem 18 *Recall that a trapezoid is a quadrilateral with two parallel sides. Consider the following picture:*



How does the above picture prove that the area of a trapezoid is

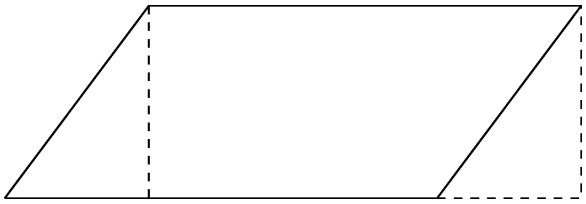
$$\text{area} = \frac{h(b_1 + b_2)}{2}$$

where h is the height of the trapezoid and b_1, b_2, are the lengths of the parallel sides?

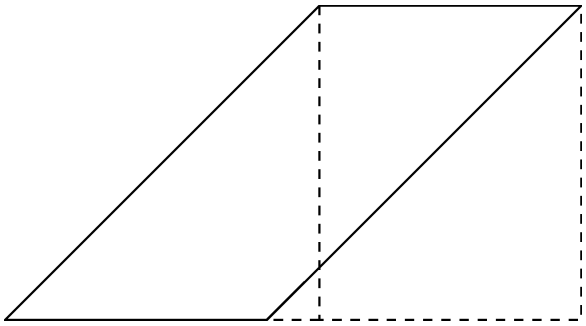
Problem 19 *Look at the previous problem. Can you use a similar idea to prove that the area of a parallelogram*

is the length of the base times the height?

Problem 20 *Explain how the following picture "proves" that the area of a parallelogram is base times height.*



Now suppose that a student, say Geometry Giorgio attempts to solve a similar problem. In an attempt to prove the formula for the area of a parallelogram, Geometry Giorgio draws the following picture:



At this point Geometry Giorgio says that he has proved the formula for area of a parallelogram. What do you think of his picture? Give a complete argument based on his picture.

Constructions Problems

Short-answer problems about constructions.

Question 21 *What is your name?*

Problem 22 *Given a line segment, construct an equilateral triangle whose edge has the length of the given segment. Explain the steps in your construction and how you know it works.*

Problem 23 *Use a compass and straightedge to bisect a given line segment. Explain the steps in your construction and how you know it works.*

Problem 24 *Given a line segment with a point on it, construct a line perpendicular to the segment that passes through the given point. Explain the steps in your construction and how you know it works.*

Problem 25 *Use a compass and straightedge to bisect a given angle. Explain the steps in your construction and how you know it works.*

Problem 26 *Given an angle and some point [or a ray], use a compass and straightedge to copy the angle so that the new angle has as its vertex the given point [or a ray as one side of the angle]. Explain the steps in your construction and how you know it works.*

Problem 27 *Given a point and line, construct a line perpendicular to the given line that passes through the given point. Explain the steps in your construction and how you know it works.*

Author(s): Bart Snapp and Brad Findell

Problem 28 *Given a point and line, construct a line parallel to the given line that passes through the given point. Explain the steps in your construction and how you know it works.*

Problem 29 *Construct a* 30-60-90 *right triangle. Explain the steps in your construction and how you know it works.*

Problem 30 *Construct an isosceles right triangle. Explain the steps in your construction and how you know it works.*

Anatomy of Figures

Short-answer problems about centers of triangles.

Question 31 *What is your name?*

Problem 32 *Compare and contrast the idea of "intersecting sets" with the idea of "intersecting lines."*

Problem 33 *Place three points in the plane. Give a detailed discussion explaining how they may or may not be on a line.*

Problem 34 *Place three lines in the plane. Give a detailed discussion explaining how they may or may not intersect.*

Problem 35 *Explain how a perpendicular bisector is different from an altitude. Draw an example to illustrate the difference.*

Problem 36 *Explain how a median is different from an angle bisector. Draw an example to illustrate the difference.*

Problem 37 *What is the name of the point that is the same distance from all three sides of a triangle? Explain your reasoning.*

Problem 38 *What is the name of the point that is the same distance from all three vertexes of a triangle? Explain your reasoning.*

Author(s): Bart Snapp and Brad Findell

Problem 39 *Could the circumcenter be outside the triangle? If so, draw a picture and explain. If not, explain why not using pictures as necessary.*

Problem 40 *Could the orthocenter be outside the triangle? If so, draw a picture and explain. If not, explain why not using pictures as necessary.*

Problem 41 *Could the incenter be outside the triangle? If so, draw a picture and explain. If not, explain why not using pictures as necessary.*

Problem 42 *Could the centroid be outside the triangle? If so, draw a picture and explain. If not, explain why not using pictures as necessary.*

Problem 43 *Are there shapes that do not contain their centroid? If so, draw a picture and explain. If not, explain why not using pictures as necessary.*

Problem 44 *Draw an equilateral triangle. Now draw the lines containing the altitudes of this triangle. How many orthocenters do you have as intersections of lines in your drawing? Hints:*

(a) *More than one.*

(b) *How many triangles are in the picture you drew?*

Problem 45 *Given a triangle, construct the circumcenter. Explain the steps in your construction.*

Problem 46 *Given a triangle, construct the orthocenter. Explain the steps in your construction.*

Problem 47 *Given a triangle, construct the incenter. Explain the steps in your construction.*

Problem 48 *Given a triangle, construct the centroid. Explain the steps in your construction.*

Problem 49 *Given a triangle, construct the incircle. Explain the steps in your construction.*

Problem 50 *Given a triangle, construct the circumcircle. Explain the steps in your construction.*

Problem 51 *Given a circle, give a construction that finds its center.*

Problem 52 *Where is the circumcenter of a right triangle? Explain your reasoning.*

Problem 53 *Where is the orthocenter of a right triangle? Explain your reasoning.*

Problem 54 *Can you draw a triangle where the circumcenter, orthocenter, incenter, and centroid are all the same point? If so, draw a picture and explain. If not, explain why not using pictures as necessary.*

Problem 55 *True or False: Explain your conclusions.*

(a) *An altitude of a triangle is always perpendicular to a line containing some side of the triangle.*

(b) *An altitude of a triangle always bisects some side of the triangle.*

(c) *The incenter is always inside the triangle.*

(d) *The circumcenter, the centroid, and the orthocenter always lie in a line.*

(e) *The circumcenter can be outside the triangle.*

(f) *The orthocenter is always inside the triangle.*

(g) *The centroid is always inside the incircle.*

Problem 56 *Given 3 distinct points not all in a line, construct a circle that passes through all three points. Explain the steps in your construction.*
